## 1 SCF

This is Version 1 of the Hartree-Fock theory implemented for closed shells (RHF) and open shells (UHF-DODS) calculations.

**NAME** SCF

Perform LCAO-MO-SCF calculation on a molecule.

**SYNOPSIS**

```
double precision function scf(H, C, nbasis, nelec, nfile,
irite, damp, interp, E, HF, V, R, Rold, Ubar, eps)
integer nbasis, nelec, nfile, irite
double precision damp, E
double precision H(ARB), C(ARB), HF(ARB), V(ARB), R(ARB)
double precision Rold(ARB), Ubar(ARB), eps(ARB)
```

**DESCRIPTION**

Perform LCAO-MO calculation of either closed-shell RHF type or more general open-shell (real) UHF-DODS type. The method is traditional Roothan repeated diagonalizations of Hartree-Fock matrix until self-consistency is reached:

$$\mathbf{F} \cdot \mathbf{C} = \mathbf{S} \cdot \mathbf{C} \cdot \epsilon$$

**ARGUMENTS**

**H** Input: One-electron Hamiltonian of size (**nbasis** x **nbasis**), i.e., matrix elements of one-electron operator

**C** Input/Output: An initial MO matrix - it must at least orthogonalize the basis. Normally, it is simply the orthogonalization matrix  $\mathbf{S}^{-\frac{1}{2}}$ . On output the SCF **C** matrix is placed here.

**nbasis** Input: the number of *spatial* orbitals in the basis (i.e., half of the number of the spin-basis set functions if **nelec**  $\geq$  0)

**nelec** Input: The number of electrons in the system.

**nfile** The electron-repulsion file unit.

**itite** Channel number for convergence information or zero if this information is not necessary.

**damp** Hartree-Fock damping parameter.

**interp** Interpolation parameter. If 0 no interpolation will be undertaken.

**HF** Output: for use as the Fock matrix

**V** Workspace:

**R** Output: Density matrix

**Rold** Workspace:

**Ubar** Workspace:

**eps** Output: orbital energies (first **nelec** are the occupied orbitals)

**E** Output: Total HF electronic energy

**RETURNS**

YES if the calculation is converged in **MAX\_SCF\_ITERATIONS**

NO if no convergence is met. Typical usage: if ( SCF(.....)  
.EQ. YES ) then

output succesful calculation
